

Plastex Lok

100% recycled heavy duty open grid PVC tiles

Plastex Lok is a hard wearing open grid tiling system made from 100% REACH compliant recycled PVC, delivering long life and value for money.

It can be used as a temporary or permanent flooring solution for coverage of large areas in the workplace with the likelihood of heavy spillage, such as work stations, finishing/assembly areas, laboratories, localised workcells and machine shops.

The open grid format and 16mm height facilitate drainage and soil removal, whilst the pimpled surface guarantees slip resistance for improved safety at work.

Plastex Lok tiles are resistant to most acids and solvents, are flexible and easy to fit.

- *Open grid interlocking tiles*
- *Made from 100% REACH compliant recycled PVC*
- *Slip resistant, hard wearing on pimpled surface*
- *Chemical, oil and acid resistant*
- *Made in the UK*

Tile size:
500mm x 500mm x 16mm

Colour:
Black

Packaging:
16 tiles per box
(4 m² per box)
